

Total and Alcohol-Related Fatality Rates by State, 2002-2003

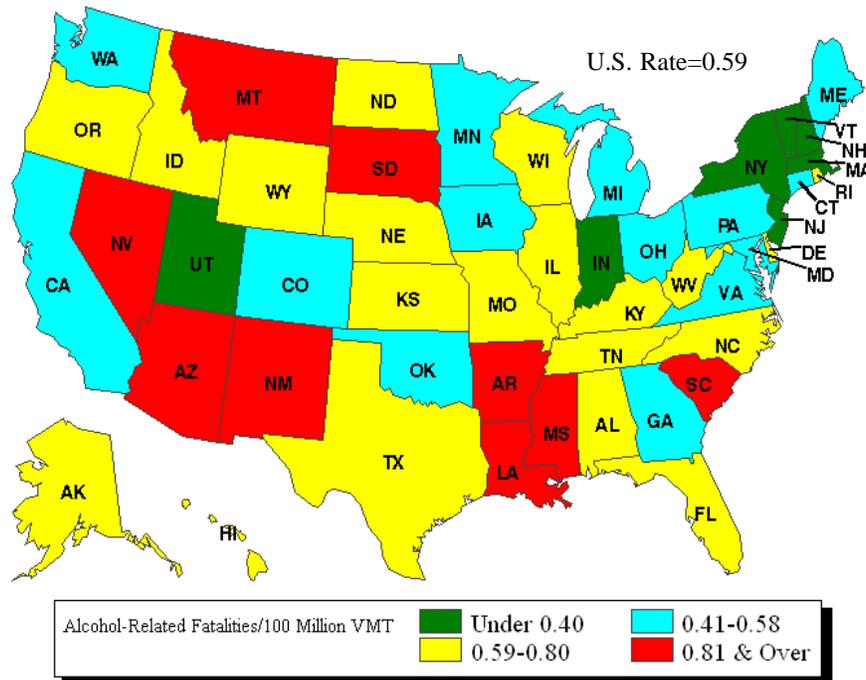

Rajesh Subramanian

Introduction

This Research Note presents updated statistics on the number of fatalities and alcohol-related fatalities by state as well as the rate per Vehicle Miles of Travel (VMT). In 2003, the total and alcohol-related fatality rates declined to 1.48 and 0.59, respectively, as compared to 1.51 and 0.61, respectively, in 2002. The data used in this report uses the 2002 Final and 2003 Annual Report File (ARF) of NHTSA's Fatality Analysis Reporting System (FARS). Annual VMT data by state is released by the FHWA. The number of alcohol-

related fatalities are generated using BAC values reported to FARS and imputed BAC values when they are not reported. Figure 1 depicts the number of alcohol-related fatalities per 100 Million VMT for each state in 2003. The states are color coded as to whether their rates are at or above (yellow, red) the national rate of 0.59 or below (blue, green). Table 1 (overleaf) depicts the statistics for 2002 and 2003. In 2003, the alcohol-related fatality rate declined from 2002 in a total of thirty-one states and Puerto Rico.
